Postgres Window Magic

BRUCE MOMJIAN

This presentation explains the many window function facilities and how they can be used to produce useful SQL query results. *Creative Commons Attribution License* http://momjian.us/presentations

Last updated: November, 2017

Outline

- 1. Introduction to window functions
- 2. Window function syntax
- 3. Window syntax with generic aggregates
- 4. Window-specific functions
- 5. Window function examples
- 6. Considerations

1. Introduction to Window Functions

https://www.flickr.com/photos/conalg/

Postgres Data Analytics Features

- Aggregates
- Optimizer
- ► Server-side languages, e.g. PL/R
- Window functions
- Bitmap heap scans
- Tablespaces
- Data partitioning
- Materialized views
- Common table expressions (CTE)
- BRIN indexes
- ► GROUPING SETS, ROLLUP, CUBE
- Parallelism
- Sharding (in progress)

What Is a Window Function?

A window function performs a calculation across a set of table rows that are somehow related to the current row. This is comparable to the type of calculation that can be done with an aggregate function. However, window functions do not cause rows to become grouped into a single output row like non-window aggregate calls would. Instead, the rows retain their separate identities. Behind the scenes, the window function is able to access more than just the current row of the query result.

Keep Your Eye on the Red (Text)

https://www.flickr.com/photos/alltheaces/

Count to Ten

```
SELECT *
FROM generate_series(1, 10) AS f(x);
```

```
х
  1
 2
 3
 4
 5
 6
 7
 8
 9
10
```

All the queries used in this presentation are available at http://
momjian.us/main/writings/pgsql/window.sql.

Simplest Window Function

SELECT x, SUM(x) OVER ()
FROM generate_series(1, 10) AS f(x);

| х | sum |
|----|-----|
| | + |
| 1 | 55 |
| 2 | 55 |
| 3 | 55 |
| 4 | 55 |
| 5 | 55 |
| 6 | 55 |
| 7 | 55 |
| 8 | 55 |
| 9 | 55 |
| 10 | 55 |

Two OVER Clauses

SELECT x, COUNT(x) OVER (), SUM(x) OVER ()
FROM generate_series(1, 10) AS f(x);

| х | count | sum |
|----|-------|-----|
| | + | + |
| 1 | 10 | 55 |
| 2 | 10 | 55 |
| 3 | 10 | 55 |
| 4 | 10 | 55 |
| 5 | 10 | 55 |
| 6 | 10 | 55 |
| 7 | 10 | 55 |
| 8 | 10 | 55 |
| 9 | 10 | 55 |
| 10 | 10 | 55 |

WINDOW Clause

SELECT x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_series(1, 10) AS f(x)
WINDOW w AS ();

| x | count | sum |
|----|-------|-----|
| + | | + |
| 1 | 10 | 55 |
| 2 | 10 | 55 |
| 3 | 10 | 55 |
| 4 | 10 | 55 |
| 5 | 10 | 55 |
| 6 | 10 | 55 |
| 7 | 10 | 55 |
| 8 | 10 | 55 |
| 9 | 10 | 55 |
| 10 | 10 | 55 |

Let's See the Defaults

SELECT x, COUNT(x) OVER w, SUM(x) OVER w FROM generate_series(1, 10) AS f(x) WINDOW w AS (RANGE BETWEEN

UNBOUNDED PRECEDING AND CURRENT ROW);

| x | count | sum |
|----|-------|-----|
| + | | + |
| 1 | 10 | 55 |
| 2 | 10 | 55 |
| 3 | 10 | 55 |
| 4 | 10 | 55 |
| 5 | 10 | 55 |
| 6 | 10 | 55 |
| 7 | 10 | 55 |
| 8 | 10 | 55 |
| 9 | 10 | 55 |
| 10 | 10 | 55 |

2. Window Function Syntax

https://www.flickr.com/photos/bgreenlee/

Window Syntax

```
WINDOW (
    [PARTITION BY ...]
    [ORDER BY ...]
    [
        { RANGE | ROWS }
        { frame_start | BETWEEN frame_start AND frame_end }
    ]
)
```

where frame_start and frame_end can be:

- UNBOUNDED PRECEDING
- value PRECEDING
- CURRENT ROW
- value FOLLOWING
- UNBOUNDED FOLLOWING

Bracketed clauses are optional, braces are selected. https://www.postgresql.org/docs/current/static/ sql-expressions.html#SYNTAX-WINDOW-FUNCTIONS

What Are the Defaults?

(RANGE BETWEEN UNBOUNDED PRECEDING AND CURRENT ROW)

- ► No PARTITION BY (the set is a single partition)
- ► No ORDER BY (all rows are peers of CURRENT ROW)
- ► RANGE, not ROWS (CURRENT ROW includes all peers)

Since PARTITION BY and ORDER BY are not defaults but RANGE is the default, CURRENT ROW defaults to representing all rows.

CURRENT ROW

CURRENT ROW can mean the :

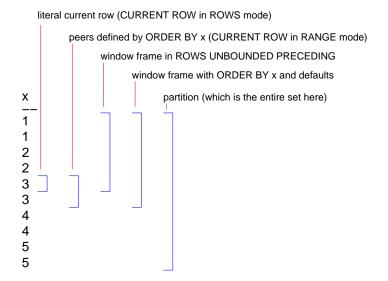

- Literal current row
- ► First or last row with the same ORDER BY value (first/last peer)
- First or last row of the partition

CURRENT ROW

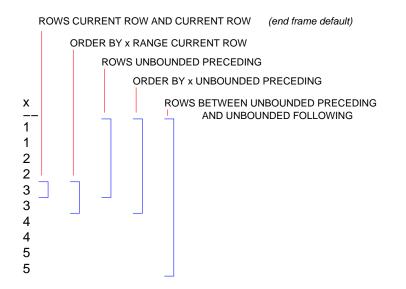

CURRENT ROW can mean the :

- Literal current row (ROWS mode)
- ► First or last row with the same ORDER BY value (first/last peer) (RANGE mode with ORDER BY)
- First or last row of the partition (RANGE mode without ORDER BY)

Visual Window Terms

SQL for Window Frames

3. Window Syntax with Generic Aggregates

https://www.flickr.com/photos/azparrot/

Back to the Last Query

SELECT x, COUNT(x) OVER w, SUM(x) OVER w FROM generate_series(1, 10) AS f(x) WINDOW w AS (RANGE BETWEEN

UNBOUNDED PRECEDING AND CURRENT ROW);

| x | count | sum |
|----|-------|-----|
| + | | + |
| 1 | 10 | 55 |
| 2 | 10 | 55 |
| 3 | 10 | 55 |
| 4 | 10 | 55 |
| 5 | 10 | 55 |
| 6 | 10 | 55 |
| 7 | 10 | 55 |
| 8 | 10 | 55 |
| 9 | 10 | 55 |
| 10 | 10 | 55 |

ROWS Instead of RANGE

SELECT x, COUNT(x) OVER w, SUM(x) OVER w FROM generate_series(1, 10) AS f(x) WINDOW w AS (ROWS BETWEEN

UNBOUNDED PRECEDING AND CURRENT ROW);

| x | count | sum |
|----|-------|-----|
| + | + | + |
| 1 | 1 | 1 |
| 2 | 2 | 3 |
| 3 | 3 | 6 |
| 4 | 4 | 10 |
| 5 | 5 | 15 |
| 6 | 6 | 21 |
| 7 | 7 | 28 |
| 8 | 8 | 36 |
| 9 | 9 | 45 |
| 10 | 10 | 55 |

Default End Frame (CURRENT ROW)

SELECT x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_series(1, 10) AS f(x)
WINDOW w AS (ROWS UNBOUNDED PRECEDING);

| х | | count | sum |
|----|---|-------|-----|
| | + | | + |
| 1 | | 1 | 1 |
| 2 | | 2 | 3 |
| 3 | | 3 | 6 |
| 4 | | 4 | 10 |
| 5 | Ì | 5 | 15 |
| 6 | Ì | 6 | 21 |
| 7 | | 7 | 28 |
| 8 | Ì | 8 | 36 |
| 9 | | 9 | 45 |
| 10 | | 10 | 55 |

Only CURRENT ROW

SELECT x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_series(1, 10) AS f(x)
WINDOW w AS (ROWS BETWEEN

CURRENT ROW AND CURRENT ROW);

| x | count | sum |
|----|-------|-----|
| | + | + |
| 1 | 1 | 1 |
| 2 | 1 | 2 |
| 3 | 1 | 3 |
| 4 | 1 | 4 |
| 5 | 1 | 5 |
| 6 | 1 | 6 |
| 7 | 1 | 7 |
| 8 | 1 | 8 |
| 9 | 1 | 9 |
| 10 | 1 | 10 |

Use Defaults

SELECT x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_series(1, 10) AS f(x)
WINDOW w AS (ROWS CURRENT ROW);

| х | count | sum |
|----|-------|-----|
| | + | -+ |
| 1 | 1 | 1 |
| 2 | 1 | 2 |
| 3 | 1 | 3 |
| 4 | 1 | 4 |
| 5 | 1 | 5 |
| 6 | 1 | 6 |
| 7 | 1 | 7 |
| 8 | 1 | 8 |
| 9 | 1 | 9 |
| 10 | 1 | 10 |

UNBOUNDED FOLLOWING

SELECT x, COUNT(x) OVER w, SUM(x) OVER w FROM generate_series(1, 10) AS f(x) WINDOW w AS (ROWS BETWEEN

CURRENT ROW AND UNBOUNDED FOLLOWING);

| x | count | sum |
|----|-------|-----|
| | + | + |
| 1 | 10 | 55 |
| 2 | 9 | 54 |
| 3 | 8 | 52 |
| 4 | 7 | 49 |
| 5 | 6 | 45 |
| 6 | 5 | 40 |
| 7 | 4 | 34 |
| 8 | 3 | 27 |
| 9 | 2 | 19 |
| 10 | 1 | 10 |

Preceding

SELECT x, COUNT(*) OVER w, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_series(1, 10) AS f(x)
WINDOW w AS (ROWS BETWEEN

1 PRECEDING AND CURRENT ROW);

| х | count | count | sum |
|----|-------|-------|-----|
| | + | + | + |
| 1 | 1 | 1 | 1 |
| 2 | 2 | 2 | 3 |
| 3 | 2 | 2 | 5 |
| 4 | 2 | 2 | 7 |
| 5 | 2 | 2 | 9 |
| 6 | 2 | 2 | 11 |
| 7 | 2 | 2 | 13 |
| 8 | 2 | 2 | 15 |
| 9 | 2 | 2 | 17 |
| 10 | 2 | 2 | 19 |

PRECEDING ignores nonexistent rows; they are not NULLS.

Use FOLLOWING

SELECT x, COUNT(x) OVER w, SUM(x) OVER w FROM generate_series(1, 10) AS f(x) WINDOW w AS (ROWS BETWEEN

CURRENT ROW AND 1 FOLLOWING);

| Х | count | sum |
|----|-------|-----|
| | + | + |
| 1 | 2 | 3 |
| 2 | 2 | 5 |
| 3 | 2 | 7 |
| 4 | 2 | 9 |
| 5 | 2 | 11 |
| 6 | 2 | 13 |
| 7 | 2 | 15 |
| 8 | 2 | 17 |
| 9 | 2 | 19 |
| 10 | 1 | 10 |

3 Preceding

SELECT x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_series(1, 10) AS f(x)
WINDOW w AS (ROWS BETWEEN

3 PRECEDING AND CURRENT ROW);

| х | | count | sum |
|----|----|-------|-----|
| | +- | | + |
| 1 | | 1 | 1 |
| 2 | | 2 | 3 |
| 3 | | 3 | 6 |
| 4 | | 4 | 10 |
| 5 | | 4 | 14 |
| 6 | | 4 | 18 |
| 7 | | 4 | 22 |
| 8 | | 4 | 26 |
| 9 | | 4 | 30 |
| 10 | | 4 | 34 |

Order By

SELECT x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_series(1, 10) AS f(x)
WINDOW w AS (ORDER BY x);

| x | count | sum |
|----|-------|-----|
| + | | + |
| 1 | 1 | 1 |
| 2 | 2 | 3 |
| 3 | 3 | 6 |
| 4 | 4 | 10 |
| 5 | 5 | 15 |
| 6 | 6 | 21 |
| 7 | 7 | 28 |
| 8 | 8 | 36 |
| 9 | 9 | 45 |
| 10 | 10 | 55 |

CURRENT ROW peers are rows with equal values for ORDER BY columns, or all partition rows if ORDER BY is not specified.

Default Frame Specified

SELECT x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_series(1, 10) AS f(x)
WINDOW w AS (ORDER BY x RANGE BETWEEN

UNBOUNDED PRECEDING AND CURRENT ROW);

| x | count | sum |
|----|-------|-----|
| | + | + |
| 1 | 1 | 1 |
| 2 | 2 | 3 |
| 3 | 3 | 6 |
| 4 | 4 | 10 |
| 5 | 5 | 15 |
| 6 | 6 | 21 |
| 7 | 7 | 28 |
| 8 | 8 | 36 |
| 9 | 9 | 45 |
| 10 | 10 | 55 |

Only CURRENT ROW

SELECT x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_series(1, 10) AS f(x)
WINDOW w AS (ORDER BY x RANGE CURRENT ROW);

| х | | count | sum |
|----|---|-------|-----|
| | + | | + |
| 1 | | 1 | 1 |
| 2 | | 1 | 2 |
| 3 | İ | 1 | 3 |
| 4 | İ | 1 | 4 |
| 5 | İ | 1 | 5 |
| 6 | İ | 1 | 6 |
| 7 | İ | 1 | 7 |
| 8 | Í | 1 | 8 |
| 9 | Ì | 1 | 9 |
| 10 | Í | 1 | 10 |

Create Table with Duplicates

CREATE TABLE generate 1 to 5 x2 AS SELECT ceil(x/2.0) AS x FROM generate_series(1, 10) AS f(x);

SELECT * FROM generate_1_to_5_x2;

Empty Window Specification

```
SELECT x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_1_to_5_x2
WINDOW w AS ();
```

| Х | | count | sum |
|---|----|-------|-----|
| | +. | | |
| 1 | | 10 | 30 |
| 1 | | 10 | 30 |
| 2 | | 10 | 30 |
| 2 | | 10 | 30 |
| 3 | | 10 | 30 |
| 3 | | 10 | 30 |
| 4 | Ì | 10 | 30 |
| 4 | | 10 | 30 |
| 5 | | 10 | 30 |
| 5 | | 10 | 30 |

RANGE With Duplicates

```
SELECT x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_1_to_5_x2
WINDOW w AS (ORDER BY x);
```

| x | count | sum |
|-------|----------|--------|
| 1 1 | 2 2 | 2 2 |
| 2 | 4 | 6 |
| 2 | 4 | 6 |
| 3 | 6 | 12 |
| 3 | 6 | 12 |
| 4 | 8 | 20 |
| 4 | 8 | 20 |
| 5 | 10 | 30 |
| 5 | 10 | 30 |

Show Defaults

SELECT x, COUNT(x) OVER w, SUM(x) OVER w FROM generate_1_to_5_x2 WINDOW w AS (ORDER BY x RANGE BETWEEN

UNBOUNDED PRECEDING AND CURRENT ROW);

| x | count | sum |
|-----|-------|-----|
| 1 1 | 0 | T |
| 1 | 2 | 2 |
| 1 | 2 | 2 |
| 2 | 4 | 6 |
| 2 | 4 | 6 |
| 3 | 6 | 12 |
| 3 | 6 | 12 |
| 4 | 8 | 20 |
| 4 | 8 | 20 |
| 5 | 10 | 30 |
| 5 | 10 | 30 |

Rows

| x | count | sum |
|---|-------|-----|
| 1 | 1 | 1 |
| 1 | 2 | 2 |
| 2 | 3 | 4 |
| 2 | 4 | 6 |
| 3 | 5 | 9 |
| 3 | 6 | 12 |
| 4 | 7 | 16 |
| 4 | 8 | 20 |
| 5 | 9 | 25 |
| 5 | 10 | 30 |

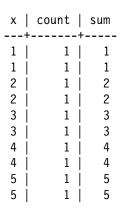

RANGE ON CURRENT ROW

```
SELECT x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_1_to_5_x2
WINDOW w AS (ORDER BY x RANGE CURRENT ROW);
```

| x | count | sum |
|---|-------|-----|
| 1 | | + |
| 1 | 2 | 2 |
| 1 | 2 | 2 |
| 2 | 2 | 4 |
| 2 | 2 | 4 |
| 3 | 2 | 6 |
| 3 | 2 | 6 |
| 4 | 2 | 8 |
| 4 | 2 | 8 |
| 5 | 2 | 10 |
| 5 | 2 | 10 |

ROWS ON CURRENT ROW

SELECT x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_1_to_5_x2
WINDOW w AS (ORDER BY x ROWS CURRENT ROW);

PARTITION BY

SELECT x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_1_to_5_x2
WINDOW w AS (PARTITION BY x);

| x | count | sum |
|---|-------|-----|
| + | ·+ | + |
| 1 | 2 | 2 |
| 1 | 2 | 2 |
| 2 | 2 | 4 |
| 2 | 2 | 4 |
| 3 | 2 | 6 |
| 3 | 2 | 6 |
| 4 | 2 | 8 |
| 4 | 2 | 8 |
| 5 | 2 | 10 |
| 5 | 2 | 10 |

Same as RANGE CURRENT ROW because the partition matches the window frame.

Create Two Partitions

SELECT int4(x > 2), x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_1_to_5_x2
WINDOW w AS (PARTITION BY x > 2);

| int4 | x | count | sum |
|------|---|-------|-----|
| 0 | 1 | 4 | |
| 0 | 1 | 4 | 6 |
| 0 | 2 | 4 | 6 |
| 0 | 2 | 4 | 6 |
| 1 | 3 | 6 | 24 |
| 1 | 3 | 6 | 24 |
| 1 | 4 | 6 | 24 |
| 1 | 4 | 6 | 24 |
| 1 | 5 | 6 | 24 |
| 1 | 5 | 6 | 24 |

Order By

```
SELECT int4(x > 2), x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate_1_to_5_x2
WINDOW w AS (PARTITION BY x > 2 ORDER BY x);
```

| int4 | x | count | sum |
|------|---|-------|-----|
| 0 | 1 | 2 | 2 |
| 0 | 1 | 2 | 2 |
| 0 | 2 | 4 | 6 |
| 0 | 2 | 4 | 6 |
| 1 | 3 | 2 | 6 |
| 1 | 3 | 2 | 6 |
| 1 | 4 | 4 | 14 |
| 1 | 4 | 4 | 14 |
| 1 | 5 | 6 | 24 |
| 1 | 5 | 6 | 24 |

Show Defaults

| int4 | x | count | sum |
|------|---|-------|-----|
| | + | + | + |
| 0 | 1 | 2 | 2 |
| 0 | 1 | 2 | 2 |
| 0 | 2 | 4 | 6 |
| 0 | 2 | 4 | 6 |
| 1 | 3 | 2 | 6 |
| 1 | 3 | 2 | 6 |
| 1 | 4 | 4 | 14 |
| 1 | 4 | 4 | 14 |
| 1 | 5 | 6 | 24 |
| 1 | 5 | 6 | 24 |

Rows

```
SELECT int4(x > 2), x, COUNT(x) OVER w, SUM(x) OVER w
FROM generate 1 \pm 5 \pm 2
WINDOW w AS (PARTITION BY x > 2 ORDER BY x ROWS BETWEEN
UNBOUNDED PRECEDING AND CURRENT ROW);
```

| int4 | x | count | sum |
|------|---|-------|-----|
| | + | + | + |
| 0 | 1 | 1 | 1 |
| 0 | 1 | 2 | 2 |
| 0 | 2 | 3 | 4 |
| 0 | 2 | 4 | 6 |
| 1 | 3 | 1 | 3 |
| 1 | 3 | 2 | 6 |
| 1 | 4 | 3 | 10 |
| 1 | 4 | 4 | 14 |
| 1 | 5 | 5 | 19 |
| 1 | 5 | 6 | 24 |

4. Window-Specific Functions

https://www.flickr.com/photos/michaeljohnbutton/

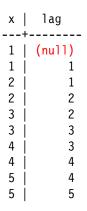

ROW_NUMBER

SELECT x, ROW_NUMBER() OVER w
FROM generate_1_to_5_x2
WINDOW w AS ();

ROW_NUMBER takes no arguments and operates on partitions, not window frames. https://www.postgresql.org/docs/current/static/
functions-window.html

LAG

```
SELECT x, LAG(x, 1) OVER w
FROM generate_1_to_5_x2
WINDOW w AS (ORDER BY x);
```

LAG(2)

```
SELECT x, LAG(x, 2) OVER w
FROM generate_1_to_5_x2
WINDOW w AS (ORDER BY x);
```

LAG and LEAD

SELECT x, LAG(x, 2) OVER w, LEAD(x, 2) OVER w
FROM generate_1_to_5_x2
WINDOW w AS (ORDER BY x);

These operate on partitions. Defaults can be specified for nonexistent rows.

FIRST_VALUE and LAST_VALUE

SELECT x, FIRST_VALUE(x) OVER w, LAST_VALUE(x) OVER w
FROM generate_1_to_5_x2
WINDOW w AS (ORDER BY x);

first value | last value хI

These operate on window frames.

UNBOUNDED Window Frame

```
SELECT x, FIRST_VALUE(x) OVER w, LAST_VALUE(x) OVER w
FROM generate_1_to_5_x2
WINDOW w AS (ORDER BY x ROWS BETWEEN
```

UNBOUNDED PRECEDING AND UNBOUNDED FOLLOWING);

| х | first_value | last_value |
|---|-------------|------------|
| 1 | 1 | 5 |
| 1 | 1 | 5 |
| 2 | 1 | 5 |
| 2 | 1 | 5 |
| 3 | 1 | 5 |
| 3 | 1 | 5 |
| 4 | 1 | 5 |
| 4 | 1 | 5 |
| 5 | 1 | 5 |
| 5 | 1 | 5 |

NTH_VALUE

```
SELECT x, NTH_VALUE(x, 3) OVER w, NTH_VALUE(x, 7) OVER w
FROM generate_1_to_5_x2
WINDOW w AS (ORDER BY x);
```

| х | nth_value | nth_value |
|--------|------------------|------------------|
| 1 | (null) (null) | (null) (null) |
| 2 2 | 2 | (null) (null) |
| 3 3 | 2 | (null) (null) |
| 4 4 | 2 | 4 4 |
| 5 5 | 2 | 4 4 |

This operates on window frames.

Show Defaults

SELECT x, NTH_VALUE(x, 3) OVER w, NTH_VALUE(x, 7) OVER w FROM generate_1_to_5_x2 WINDOW w AS (ORDER BY x RANGE BETWEEN

UNBOUNDED PRECEDING AND CURRENT ROW);

| x | nth_value | nth_value |
|---|------------------|------------------|
| 1 | (null) (null) | (null) (null) |
| 2 | 2 | (null) |
| 2 | 2 | (null) |
| 3 | 2 | (null) |
| 3 | 2 | (null) |
| 4 | 2 | 4 |
| 4 | 2 | 4 |
| 5 | 2 | 4 |
| 5 | 2 | 4 |

UNBOUNDED Window Frame

SELECT x, NTH_VALUE(x, 3) OVER w, NTH_VALUE(x, 7) OVER w FROM generate_1_to_5_x2 WINDOW w AS (ORDER BY x ROWS BETWEEN

UNBOUNDED PRECEDING AND UNBOUNDED FOLLOWING);

| x | nth_value | nth_value |
|---|-----------|-----------|
| + | + | |
| 1 | 2 | 4 |
| 1 | 2 | 4 |
| 2 | 2 | 4 |
| 2 | 2 | 4 |
| 3 | 2 | 4 |
| 3 | 2 | 4 |
| 4 | 2 | 4 |
| 4 | 2 | 4 |
| 5 | 2 | 4 |
| 5 | 2 | 4 |

RANK and DENSE_RANK

```
SELECT x, RANK() OVER w, DENSE_RANK() OVER w
FROM generate_1_to_5_x2
WINDOW w AS ();
```

| х | rank | dense | _rank |
|---|------|-------|-------|
| | + | •+ | |
| 1 | 1 | | 1 |
| 1 | 1 | | 1 |
| 2 | 1 | | 1 |
| 2 | 1 | | 1 |
| 3 | 1 | | 1 |
| 3 | 1 | | 1 |
| 4 | 1 | | 1 |
| 4 | 1 | | 1 |
| 5 | 1 | | 1 |
| 5 | 1 | | 1 |

These operate on CURRENT ROW peers in the partition.

Show Defaults

SELECT x, RANK() OVER w, DENSE_RANK() OVER w FROM generate_1_to_5_x2 WINDOW w AS (RANGE BETWEEN

UNBOUNDED PRECEDING AND CURRENT ROW);

| х | rank | | dense_rank |
|---|------|-----|------------|
| | + | -+- | |
| 1 | 1 | | 1 |
| 1 | 1 | | 1 |
| 2 | 1 | | 1 |
| 2 | 1 | | 1 |
| 3 | 1 | | 1 |
| 3 | 1 | | 1 |
| 4 | 1 | | 1 |
| 4 | 1 | | 1 |
| 5 | 1 | Ì | 1 |
| 5 | 1 | I | 1 |

Rows

SELECT x, RANK() OVER w, DENSE_RANK() OVER w FROM generate_1_to_5_x2 WINDOW w AS (ROWS BETWEEN

UNBOUNDED PRECEDING AND CURRENT ROW);

| х | rank | dense_rank |
|---|------|------------|
| | + | + |
| 1 | 1 | 1 |
| 1 | 1 | 1 |
| 2 | 1 | 1 |
| 2 | 1 | 1 |
| 3 | 1 | 1 |
| 3 | 1 | 1 |
| 4 | 1 | 1 |
| 4 | 1 | 1 |
| 5 | 1 | 1 |
| 5 | 1 | 1 |

Operates on Peers, so Needs ORDER BY

```
SELECT x, RANK() OVER w, DENSE_RANK() OVER w
FROM generate_1_to_5_x2
WINDOW w AS (ORDER BY x);
```

| х | rank + | | dense_rank |
|---|-----------|---|------------|
| 1 | 1 | | 1 |
| 1 | 1 | | 1 |
| 2 | 3 | | 2 |
| 2 | 3 | Ì | 2 |
| 3 | 5 | | 3 |
| 3 | 5 | | 3 |
| 4 | 7 | | 4 |
| 4 | 7 | Ì | 4 |
| 5 | 9 | | 5 |
| 5 | 9 | | 5 |

PERCENT_RANK, CUME_DIST, NTILE

SELECT x, (PERCENT_RANK() OVER w)::numeric(10, 2), (CUME_DIST() OVER w)::numeric(10, 2), NTILE(3) OVER w FROM generate_1_to_5_x2 WINDOW w AS (ORDER BY x);

| х | percent_rank | cume_dist | ntile |
|---|--------------|-----------|-------|
| 1 | 0.00 | 0.20 | 1 |
| 1 | 0.00 | 0.20 | 1 |
| 2 | 0.22 | 0.40 | 1 |
| 2 | 0.22 | 0.40 | 1 |
| 3 | 0.44 | 0.60 | 2 |
| 3 | 0.44 | 0.60 | 2 |
| 4 | 0.67 | 0.80 | 2 |
| 4 | 0.67 | 0.80 | 3 |
| 5 | 0.89 | 1.00 | 3 |
| 5 | 0.89 | 1.00 | 3 |

PERCENT_RANK is ratio of rows less than current row, excluding current row. CUME_DIST is ratio of rows <= current row.

PARTITION BY

```
SELECT int4(x > 2), x, RANK() OVER w, DENSE RANK() OVER w
FROM generate 1 to 5 x2
WINDOW w AS (PARTITION BY x > 2 ORDER BY x)
ORDER BY 1,2;
 int4 | x | rank | dense rank
    0
        1
    0 | 1 |
    0 2 1
               3
                             2
               3
                             2
    0 2 1
    1 | 3 |
      | 3
    1
               1
    1
        4
               3
                             2
    1 | 4
               3
                             2
                             3
               5
    1
        5
    1
        5
               5
                             3
```

PARTITION BY and Other Rank Functions

| int4 | x | percent_rank | cume_dist | ntile |
|------|---|--------------|-----------|-------|
| | + | ++ | | + |
| 0 | 1 | 0.00 | 0.50 | 1 |
| 0 | 1 | 0.00 | 0.50 | 1 |
| 0 | 2 | 0.67 | 1.00 | 2 |
| 0 | 2 | 0.67 | 1.00 | 3 |
| 1 | 3 | 0.00 | 0.33 | 1 |
| 1 | 3 | 0.00 | 0.33 | 1 |
| 1 | 4 | 0.40 | 0.67 | 2 |
| 1 | 4 | 0.40 | 0.67 | 2 |
| 1 | 5 | 0.80 | 1.00 | 3 |
| 1 | 5 | 0.80 | 1.00 | 3 |

5. Window Function Examples

https://www.flickr.com/photos/fishywang/

Create emp Table and Populate

```
CREATE TABLE emp (
    id SERIAL,
    name TEXT NOT NULL,
    department TEXT,
    salary NUMERIC(10, 2)
);
```

Emp Table

SELECT * FROM emp ORDER BY id;

| id | name | department | salary |
|----|-------|------------|---------|
| 1 | Andy | Shipping | 5400.00 |
| 2 | Betty | Marketing | 6300.00 |
| 3 | Tracy | Shipping | 4800.00 |
| 4 | Mike | Marketing | 7100.00 |
| 5 | Sandy | Sales | 5400.00 |
| 6 | James | Shipping | 6600.00 |
| 7 | Carol | Sales | 4600.00 |

Generic Aggregates

```
SELECT COUNT(*), SUM(salary),
      round(AVG(salary), 2) AS avg
FROM emp;
```

GROUP BY

```
SELECT department, COUNT(*), SUM(salary),
        round(AVG(salary), 2) AS avg
FROM emp
GROUP BY department
ORDER BY department;
```

| department | • | sum + | avg + |
|--------------------------------|---|----------------------|----------|
| Marketing Sales Shipping | • | 13400.00 10000.00 | • |

ROLLUP

```
SELECT department, COUNT(*), SUM(salary),
        round(AVG(salary), 2) AS avg
FROM emp
GROUP BY ROLLUP(department)
ORDER BY department;
```

| department | count | sum | avg |
|------------|-------|----------|---------|
| | | | + |
| Marketing | 2 | 13400.00 | 6700.00 |
| Sales | 2 | 10000.00 | 5000.00 |
| Shipping | 3 | 16800.00 | 5600.00 |
| (null) | 7 | 40200.00 | 5742.86 |

Emp.name and *Salary*

SELECT name, salary FROM emp ORDER BY salary DESC;

| name | salary |
|------------------|--------------------|
| Mike James | 7100.00 |
| Betty | 6300.00 5400.00 |
| Andy Sandy | 5400.00 |
| Tracy Carol | 4800.00 4600.00 |

OVER

```
SELECT name, salary, SUM(salary) OVER ()
FROM emp
ORDER BY salary DESC;
```

| name | salary | sum |
|-------|---------|----------|
| Mike | 7100.00 | 40200.00 |
| James | 6600.00 | 40200.00 |
| Betty | 6300.00 | 40200.00 |
| Andy | 5400.00 | 40200.00 |
| Sandy | 5400.00 | 40200.00 |
| Tracy | 4800.00 | 40200.00 |
| Carol | 4600.00 | 40200.00 |

Percentages

```
SELECT name, salary,
        round(salary / SUM(salary) OVER () * 100, 2) AS pct
FROM emp
ORDER BY salary DESC;
```

| name | salary | pct |
|-------|---------|-------|
| Mike | 7100.00 | 17.66 |
| James | 6600.00 | 16.42 |
| Betty | 6300.00 | 15.67 |
| Andy | 5400.00 | 13.43 |
| Sandy | 5400.00 | 13.43 |
| Tracy | 4800.00 | 11.94 |
| Carol | 4600.00 | 11.44 |

Cumulative Totals Using ORDER BY

```
SELECT name, salary,
SUM(salary) OVER (ORDER BY salary DESC ROWS BETWEEN
UNBOUNDED PRECEDING AND CURRENT ROW)
```

FROM emp

```
ORDER BY salary DESC;
```

| name | salary | sum |
|-------|---------|----------|
| Mike | 7100.00 | 7100.00 |
| James | 6600.00 | 13700.00 |
| Betty | 6300.00 | 20000.00 |
| Andy | 5400.00 | 25400.00 |
| Sandy | 5400.00 | 30800.00 |
| Tracy | 4800.00 | 35600.00 |
| Carol | 4600.00 | 40200.00 |

Cumulative totals are often useful for time-series rows.

Window AVG

```
SELECT name, salary,
        round(AVG(salary) OVER (), 2) AS avg
FROM emp
ORDER BY salary DESC;
```

| name | salary | avg |
|-------|---------|---------|
| Mike | 7100.00 | 5742.86 |
| James | 6600.00 | 5742.86 |
| Betty | 6300.00 | 5742.86 |
| Andy | 5400.00 | 5742.86 |
| Sandy | 5400.00 | 5742.86 |
| Tracy | 4800.00 | 5742.86 |
| Carol | 4600.00 | 5742.86 |

Difference Compared to Average

```
SELECT name, salary,
    round(AVG(salary) OVER (), 2) AS avg,
    round(salary - AVG(salary) OVER (), 2) AS diff_avg
FROM emp
ORDER BY salary DESC;
```

| name | salary | avg | diff_avg + |
|-------|---------|---------|---------------|
| Mike | 7100.00 | 5742.86 | 1357.14 |
| James | 6600.00 | 5742.86 | 857.14 |
| Betty | 6300.00 | 5742.86 | 557.14 |
| Andy | 5400.00 | 5742.86 | -342.86 |
| Sandy | 5400.00 | 5742.86 | -342.86 |
| Tracy | 4800.00 | 5742.86 | -942.86 |
| Carol | 4600.00 | 5742.86 | -1142.86 |

Compared to the Next Value

| name | salary + | diff_next |
|--|---|---|
| Mike James Betty Sandy Andy Tracy | + 7100.00 6600.00 6300.00 5400.00 5400.00 4800.00 | + 500.00 300.00 900.00 0.00 600.00 200.00 |
| Carol | 4600.00 | (null) |

Compared to Lowest-Paid Employee

```
SELECT name, salary,
       salary - LAST VALUE(salary) OVER w AS more,
       round((salary - LAST VALUE(salary) OVER w) /
        LAST VALUE(salary) OVER w * 100) AS pct more
FROM emp
WINDOW w AS (ORDER BY salary DESC ROWS BETWEEN
             UNBOUNDED PRECEDING AND UNBOUNDED FOLLOWING)
```

```
ORDER BY salary DESC;
```

| name | salary | more | pct_more |
|-------|---------|---------|----------|
| Mike | 7100.00 | 2500.00 | 54 |
| James | 6600.00 | 2000.00 | 43 |
| Betty | 6300.00 | 1700.00 | 37 |
| Andy | 5400.00 | 800.00 | 17 |
| Sandy | 5400.00 | 800.00 | 17 |
| Tracy | 4800.00 | 200.00 | 4 |
| Carol | 4600.00 | 0.00 | 0 |

RANK and DENSE_RANK

SELECT name, salary, RANK() OVER s, DENSE_RANK() OVER s
FROM emp
WINDOW s AS (ORDER BY salary DESC)
ORDER BY salary DESC;

| name | salary | rank | dense_rank |
|-------|---------|------|------------|
| Mike | 7100.00 | 1 | 1 |
| James | 6600.00 | 2 | 2 |
| Betty | 6300.00 | 3 | 3 |
| Andy | 5400.00 | 4 | 4 |
| Sandy | 5400.00 | 4 | 4 |
| Tracy | 4800.00 | 6 | 5 |
| Carol | 4600.00 | 7 | 6 |

Departmental Average

```
SELECT name, department, salary,
    round(AVG(salary) OVER
        (PARTITION BY department), 2) AS avg,
        round(salary - AVG(salary) OVER
        (PARTITION BY department), 2) AS diff_avg
FROM emp
ORDER BY department, salary DESC;
```

| name | department | salary | avg | diff_avg |
|-------|------------|---------|---------|----------|
| Mike | Marketing | 7100.00 | 6700.00 | 400.00 |
| Betty | Marketing | 6300.00 | 6700.00 | -400.00 |
| Sandy | Sales | 5400.00 | 5000.00 | 400.00 |
| Carol | Sales | 4600.00 | 5000.00 | -400.00 |
| James | Shipping | 6600.00 | 5600.00 | 1000.00 |
| Andy | Shipping | 5400.00 | 5600.00 | -200.00 |
| Tracy | Shipping | 4800.00 | 5600.00 | -800.00 |

WINDOW Clause

```
SELECT name, department, salary,
        round(AVG(salary) OVER d, 2) AS avg,
        round(salary - AVG(salary) OVER d, 2) AS diff_avg
FROM emp
WINDOW d AS (PARTITION BY department)
ORDER BY department, salary DESC;
```

| name | department | salary | avg | diff_avg |
|-------|------------|---------|---------|----------|
| Mike | Marketing | 7100.00 | 6700.00 | 400.00 |
| Betty | Marketing | 6300.00 | 6700.00 | -400.00 |
| Sandy | Sales | 5400.00 | 5000.00 | 400.00 |
| Carol | Sales | 4600.00 | 5000.00 | -400.00 |
| James | Shipping | 6600.00 | 5600.00 | 1000.00 |
| Andy | Shipping | 5400.00 | 5600.00 | -200.00 |
| Tracy | Shipping | 4800.00 | 5600.00 | -800.00 |

Compared to Next Department Salary

```
SELECT name, department, salary,
        salary - LEAD(salary, 1) OVER
        (PARTITION BY department
        ORDER BY salary DESC) AS diff_next
FROM emp
ORDER BY department, salary DESC;
```

| name | department | salary | diff_next |
|-------|------------|---------|-----------|
| Mike | Marketing | 7100.00 | 800.00 |
| Betty | Marketing | 6300.00 | (null) |
| Sandy | Sales | 5400.00 | 800.00 |
| Carol | Sales | 4600.00 | (null) |
| James | Shipping | 6600.00 | 1200.00 |
| Andy | Shipping | 5400.00 | 600.00 |
| Tracy | Shipping | 4800.00 | (null) |

Departmental and Global Ranks

| name | department | salary | dept_rank | global_rank |
|--|---|---------|--|----------------------------|
| Mike Betty Sandy Carol James Andy | + Marketing Marketing Sales Sales Shipping Shipping | + | 1 2 1 2 1 2 1 2 | 1 3 4 7 2 4 |
| Tracy | Shipping | 4800.00 | 3 | 6 |

6. Considerations

https://www.flickr.com/photos/10413717@N08/

Tips

- Do you want to split the set? (PARTITION BY creates multiple partitions)
- ► Do you want an order in the partition? (use ORDER BY)
- ► How do you want to handle rows with the same ORDER BY values?
 - RANGE vs ROW
 - RANK vs DENSE_RANK
- Do you need to define a window frame?
- Window functions can define their own partitions, ordering, and window frames.
- Multiple window names can be defined in the WINDOW clause.
- Pay attention to whether window functions operate on frames or partitions.

Window Function Summary

| Scope | Туре | Function | Description |
|-----------|-------------|---------------|-----------------------------|
| | computation | generic aggs. | e.g. SUM, AVG |
| frame | | FIRST_VALUE | first frame value |
| manie | row access | LAST_VALUE | last frame value |
| | | NTH_VALUE | <i>n</i> th frame value |
| | | LAG | row before current |
| partition | row access | LEAD | row after current |
| | | ROW_NUMBER | current row number |
| | | CUME_DIST | cumulative distribution |
| | ranking | DENSE_RANK | rank without gaps |
| | | NTILE | rank in <i>n</i> partitions |
| | | PERCENT_RANK | percent rank |
| | | RANK | rank with gaps |

Window functions never process rows outside their partitions. However, without PARTITION BY the partition is the entire set.

Conclusion
